FINAL TEXT FOR TRANSLATION PRIOR TO APPLYING APPROVED TRIAL DESIGN

Have you recently been diagnosed with type 1 diabetes?

Consider volunteering for a clinical research trial

NN9828-4150 is a voluntary clinical research trial for people who have been newly diagnosed with type 1 diabetes mellitus

You may qualify for the NN9828-4150 trial if you:

- Have been diagnosed with type 1 diabetes mellitus in the past 2-3 months
- Are between 18-45 years of age
- Are available to attend visits at the physician's office every 2-4 weeks for up to 1 1/2 years

The aim of the NN9828-4150 trial is to determine if a combination of two investigational drugs, in addition to the standard treatment, is able to preserve the function of insulin-producing cells in the pancreas. If you are eligible for the NN9828-4150 trial, you can decide whether or not you would like to take part.

Your participation in this trial may help other people diagnosed with type 1 diabetes mellitus in the future.

If you qualify to participate, you will receive trial-related medical care and a combination of two investigational drugs at no charge.
